

CLOUD PACS FOR ENT & SPECIALTY PRACTICES

Every Modality.
Every Workflow.
One Cloud.

Cloud PACS built for ENT, surgery centers, and specialty practices — capture, archive, report, and share imaging and video from one secure platform.

THE PROBLEM WE SOLVE

Your imaging is scattered. *Bring it together.*

Studies live on one machine, video on another, reports somewhere else — and none of it travels with the patient. CloudEndo unifies the entire workflow in one secure cloud: capture, report, stream, and share from anywhere.

01 **Schedule**

Worklist built in, or sync orders straight from your EMR. Modality Worklist (MWL) serves scheduled procedures to your imaging equipment.

02 **Capture**

Your existing endoscopes in the browser, images from a phone, or DICOM from any modality on your network.

03 **Report**

Templated clinical reports with embedded images, a sign-off and amendment workflow, and one-click PDF export.

04 **Stream**

Broadcast live procedures to remote viewers, with optional recording for later playback.

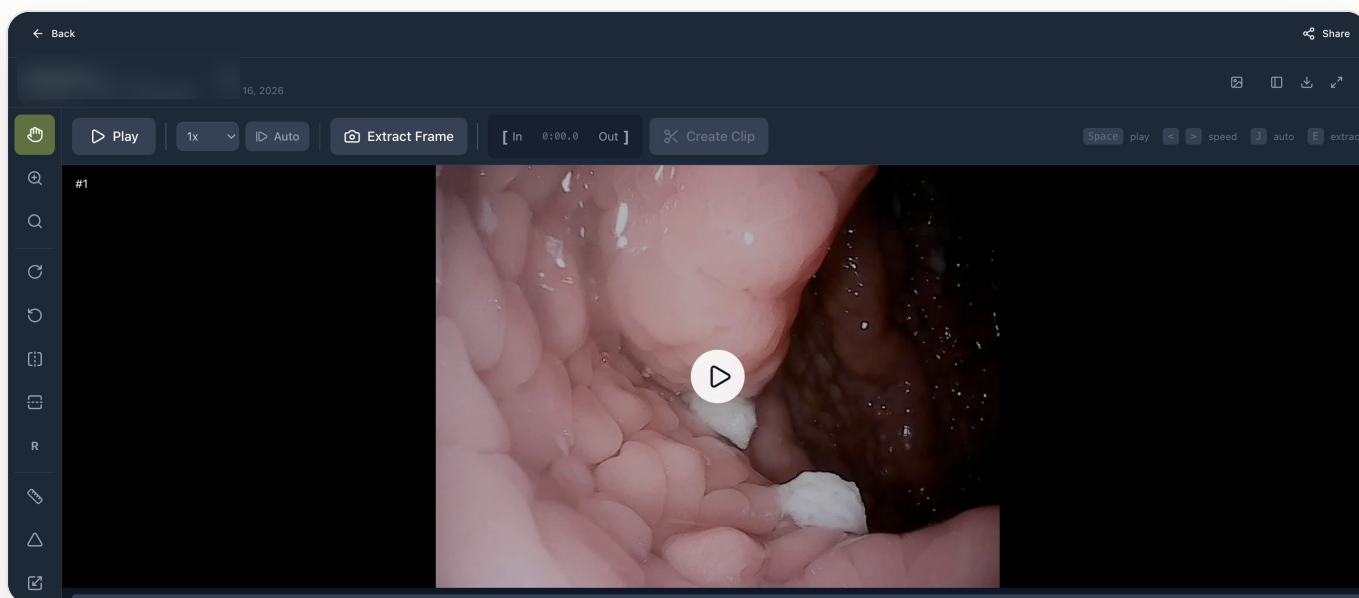

05 **Share**

Secure, authenticated links for clinicians, referring physicians, and patients — with expiration you control.

CAPTURE, ANYWHERE

Browser, phone, *or fully offline.*

However your practice works, CloudEndo captures it — straight from your scopes, your phone, or any modality on your network.

Capture Suite

Capture from your existing endoscopes right in your browser, upload images and video from a phone, or receive DICOM from any modality through the cloud or the desktop server. No capture box required.

Desktop App — works offline

A local DICOM server on your network: receive from any modality, capture offline, and sync to the cloud automatically when you're back online. Windows and macOS. Configurable local retention, 30–180 days.

WORKS WITH WHAT YOU ALREADY HAVE

Scopes & cameras

Capture directly from your existing endoscopes and procedure cameras — adapter kits available for a wide range of scope systems.

Modalities

Receive DICOM from ultrasound, X-ray, CT, MR, and more over your network.

Your EMR

ModMed integration keeps studies and reports flowing to the patient record.

BUILT FOR YOUR PRACTICE

Fits your EMR. *Meets your compliance bar.*

CloudEndo is built for how medical practices actually work — from the order in your EMR to the signed report in the chart, with HIPAA controls at every step.

ModMed EMR integration

Launch studies directly from the patient chart, sync orders to the worklist, and push signed reports and images back to the record via FHIR.

Patient portal

Patients view their studies, procedure recordings, and reports through a secure, authenticated portal — no discs, no email attachments.

Modality Worklist

Serve scheduled procedures to your imaging equipment over standard DICOM MWL, so demographics are right at the modality.

De-identified export

Safe Harbor de-identification for research exports and second opinions, with configurable identifier handling.

HIPAA COMPLIANCE SUITE

Audit logging

Retention policies

BAA management

Risk assessments

Role-based access

Session timeout

From procedure *to chart, in minutes.*

Close the loop on every study without leaving the platform.

Clinical Reporting

Build reports with embedded images, procedure-specific templates, a sign-off and amendment workflow, and one-click PDF export — then push them to the EMR.

Live Streaming

Broadcast procedures in real time with viewer invitations, optional recording, and playback through the portal.

Sharing & Patient Portal

Authenticated share links with configurable expiration. Patients and referring physicians access studies, recordings, and reports securely.

Video Editor & Frame Extraction

Trim procedure video and pull still frames as secondary captures — originals always preserved. Export studies as images + video, or raw DICOM.

SECURE & COMPLIANT

Built for healthcare *from the ground up.*

Enterprise-grade security on infrastructure your IT team already trusts.

AUDIT RETENTION

AWS

HOSTED

Security & Compliance

AES-256 encryption at rest, TLS in transit, role-based access with custom roles, six-year HIPAA audit logging, automatic session timeout, retention policies, BAA management, and risk assessments. HIPAA-ready.

Access that leaves a trail

Unique user IDs, no shared accounts, and a complete audit record of who viewed what and when — reviewable and exportable for compliance.

THREE STEPS TO LIVE

1

Sign up

Start a 14-day trial at
app.cloudendo.com/signup —
nothing to install.

2

Connect

Plug in your scope or point a
modality at the desktop server.
Capture in minutes.

3

Go live

Report, stream, and share. We help
you migrate existing studies.

Start your *free trial*.
